Evidence for peacebuilding decisions

Peace Intel reads the peacebuilding evidence base, thousands of papers, evaluations, and conflict datasets, and answers your questions with citations you can trace back to the source. Built for the people who decide where to intervene, what to try, and how to fund it.

Two questions that come up before conflict arrives.

04 Measuring Your Project's Peace Impact

Understand the conflict prevention value of your development work.

You fund development in fragile states with no clear read on its conflict implications. Development and peacebuilding work in silos, with no shared evidence base a non-specialist can use. Boards and ministers ask "what is the conflict angle?" and you have no evidence-backed answer. You are about to approve a project without checking whether it could worsen local tensions. Conflict-sensitive development literature is dense and scattered, and no one on your team has time.

WHAT PEACE INTEL PROVIDES

- How health, education, infrastructure, and governance projects have affected conflict in comparable settings.
- A citable, evidence-grounded read on your project's conflict implications. A picture, not a score.
- Ask "does girls' education reduce conflict risk in fragile states?" and get a cited answer.
- The same project can calm or inflame conflict depending on conditions. Evidence for yours.
- Named evidence gaps, where the field has not studied the question enough to answer confidently.

05 Investing Early in Resilience

Prioritize development investments that build conflict resilience.

There is no evidence basis for ranking development investments on conflict prevention grounds. Budgets follow sectoral mandates rather than what the research says actually prevents conflict. Prevention spending has to be justified to budget-holders who want evidence, not rhetoric. You want to invest before conflict erupts, but not where the evidence says it pays off. Development and conflict experts give different advice, with no neutral evidence base to reconcile them.

WHAT PEACE INTEL PROVIDES

- Which investment types are associated with reduced conflict risk, from 5,000+ studies and 700+ evaluations.
- Which resilience gains hold across settings and which depend on local conditions.
- Ask "what prevents conflict in post-conflict states?" and get a synthesized, citable answer.
- Sector against sector: education, infrastructure, governance, and economic development compared as prevention.
- Sequencing and conditions: the foundational investments that make later prevention effects possible.

Peace Intel launches publicly at PeaceCon, January 2027. Pilot partnerships available now.
