Evidence for peacebuilding decisions

Peace Intel reads the peacebuilding evidence base, thousands of papers, evaluations, and conflict datasets, and answers your questions with citations you can trace back to the source. Built for the people who decide where to intervene, what to try, and how to fund it.

Three questions that come up once conflict is already underway.

01 Where to Intervene

Find where the evidence says your resources will matter most.

You allocate limited funds across dozens of active conflicts with no clear basis for prioritizing. No straightforward way to compare which conflicts are tractable and which are not. Boards and ministers ask “why this conflict?” and you have no research-backed answer. Evidence on what works where sits in thousands of papers, much of it paywalled.

WHAT PEACE INTEL PROVIDES

- Synthesized evidence on where each intervention type has succeeded and failed, by context.
- An evidence quality signal that flags where findings are strong, thin, or contested.
- Side-by-side comparison of conflict dynamics by region and by conflict type.
- Section-level citations back to source, so briefings hold up with boards and ministers.

02 Which Intervention to Choose

Match your intervention to what the evidence supports.

The evidence base is split across organizations, eras, and fields, and rarely transfers between contexts. Your organization defaults to its usual approach without knowing if the evidence supports it here. You can find evidence on single interventions, but nowhere to compare options for your conflict type. Why interventions fail matters as much as why they succeed, and reviews rarely surface it.

WHAT PEACE INTEL PROVIDES

- Recommendations drawn from the interventions that worked in the most similar contexts.
- Failure modes: the conditions under which each intervention type has broken down.
- Ask “what works in civil wars with external backers?” and get a synthesized, cited answer.
- Structured evaluation data: 12,000+ indicators drawn from roughly 700 peacebuilding evaluations.

03 How to Implement It

Turn evidence into actionable implementation guidance.

Your team has a strategy but no clear path from there to execution. An intervention can be run many ways, and it is hard to know which will work. Research says an intervention works but rarely how it was run. Operational detail stays buried. You are about to start without knowing whether the conditions for success are present.

WHAT PEACE INTEL PROVIDES

- Success conditions: what the research says must be in place before implementation begins.
- Full text, not abstracts, so the implementation detail summaries leave out is actually surfaced.
- Common pitfalls, and how practitioners have handled them, drawn from case studies and evaluations.
- Ask “how do you sequence DDR programs?” and get a synthesized, cited answer.

Peace Intel launches publicly at PeaceCon, January 2027. Pilot partnerships available now.
